

Figure 1: Inductive ideas in impressionist art

The Picnic on the Grass

The pointillism of Seurat in impressionist art, is based on an inductive theory. It works as art because the cognitive system of humans knows how to assemble and comprehend an image which is made up of millions of points of different locations, colours and intensities. I suggest that there is a body wave made up of millions of resonating points, and that it functions as a framework for information that is quantum in quality. This means limitless amounts of information can be used in the human body-field. A simple electromagnetic system would not be able to do this. The quantum electro-dynamic field carries the information that is needed by the living matrix of the cells of the body.

I have slowly developed this theory over 28 years by linking up a vast system of information and energy. A few months ago, I began to wonder if any other far-reaching scientific discoveries had proceeded in the same way. And I thought of Charles Darwin, the author of the biggest theory ever to hit biology. His is a theory that defies proof yet is deliciously probable. It, too, is based on millions of bits of data arranged in a certain way, coming from many disciplines of science. And the way it is arranged is one which shows coherence of data.

The Scientific Method for Big Theories

In 1859, after 20 years of prevarication, Charles Darwin published a theory which unified biology, geology, population mathematics and genetics. This very complex theory was based upon decades of careful observation of a host of animals, birds, fossils and the then existing theories of creation. In publishing his theory, Darwin was chary about his astonishing achievement. It was suggested by the philosophers J. S. Mill and W. Whewell that the scientific method he used was not of the deductive type but that he was using the principles of synthesis. In fact Mill, when the Origin of Species was published, commented that he thought that it agreed with 'the strict principles of logic'. Nowadays we see Darwin's method in science as a way of understanding rather than a method of proof. In fact, for big theories about biology, the inductive empirical method is surely the most suitable scientific procedure¹.

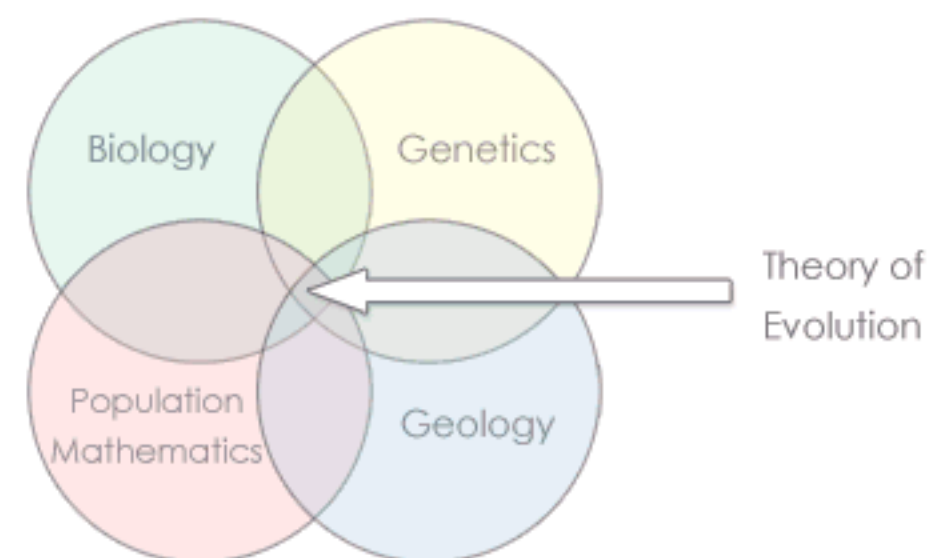

Figure 2: Inductive ideas in science

Looking at medicine and biology, we can consider the various fields of scientific knowledge that form part of our medical theories. In order to develop the theories of NES Health, I needed to unite these disciplines by a process of synthesis. The result was a system of informational correspondences written in a specific place in a wave. My discoveries were produced in reverse, as is common in discovery. The informational correspondences between things appeared first and finally, 28 years later, there appeared the human body-field wave, as a way of understanding how information is related in different fields of knowledge.

¹ David Hull, Darwin and his Critics, University of Chicago Press, 1983; ed. Phillip Appleman, Norton, New York, 2001 edition, page 260.

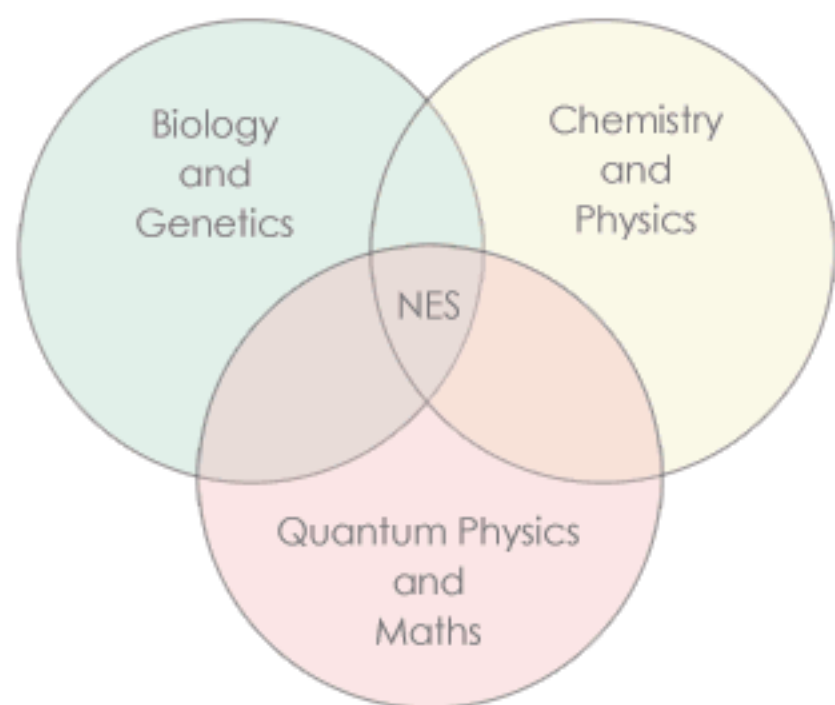

Figure 3: Inductive ideas in the development of human body-field theory

The idea that science, if it is to be considered in any way correct, should be internally coherent in a logical sense and also with other theories is quite an accepted notion. And so in the scientific method that I too used, I needed only an energetic connection between two or more things. This connection was a manifestation of exchanges of energy in the quantum wave. This showed coherence when the energies of one item and another were linked in the energy field. In the NES system, we call this Space Resonance Matching (SRM). And so we look at the NES system and how it is linked with other ideas, like the theories of Dr R. G. Hamer, which were published in 2000. My question is, does energetic coherence exist between my theories and those of Dr Hamer?

We have moved from an idea of logical coherence to one of energetic coherence, based on the phenomenon of Space Resonance Matching. Of course we are interested in the theories of biology that use waveforms of any type to explain phenomena. Why? Because the very way in which the human brain works may be one of information matching, and therefore this will show up in how scientific theories are presented and conceived.

Dr Hamer's ideas have been summarized in a waveform, a version of which is reproduced below. It represents the electromagnetic wave that is produced in a holistic sense by the function of the sympathetic and parasympathetic nervous systems in the human body. It shows the responses of the nervous system to stress. It appears at first to have little to do with the later idea of NES Health that there is a human body wave. But we do need an electromagnetic wave to make the HBF work!

Correspondences in Science

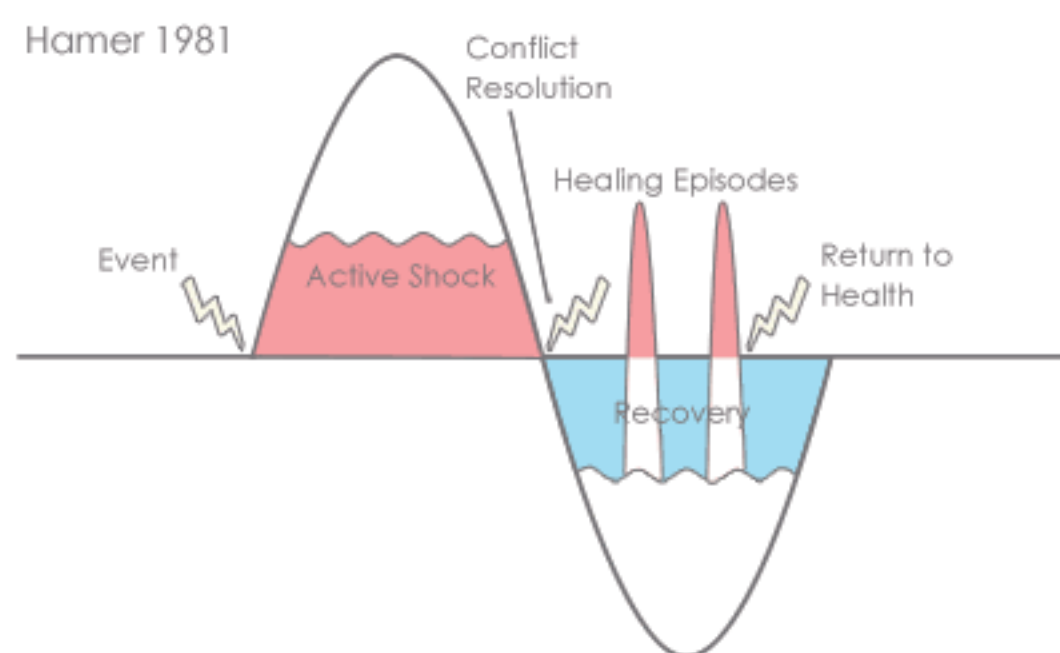

Figure 4: Phases of disease described by Hamer

Dr Hamer proposed, and I have inferred from this, that every illness had a structure imprinted in the electromagnetic wave that was produced by the nervous system. He said that the symptoms changed constantly as the illness progressed, starting with the original shock, followed by an active phase of the disease, then, at the pivotal point, by conflict resolution, or in NES language, coherence. At this point the polarity of the wave changes and we move to the recovery stage, swinging from sympathetic to parasympathetic. In this, Hamer was referring to the widely recognized progressive stages of disease. This is logical. He was not speaking about a series of chemical actions, but changes in body responses, the nervous system and episodes beginning with event-specific crises. He traced the activity of disease to emotional information and showed how coherence of information inside our body and mind is of huge importance to recovery from disease.

In developing a modern science-based energetic medicine framework, huge efforts have been made to fit it all into some composite waveform already recognized by the cogniscenti of science. But now, in 2011, I can say with certainty that it is not possible to do this. So what are we left with?

We have three wave structures that are necessary for us to explain the energetic medicine phenomena. By 'phenomena' I mean the apparent coherence, internal and external, of the human body-field. The waveforms are as follows:

1. The electric form of the wave, from the nineteenth century. The Maxwell Wave, if you like, which we need to explain all the physiology that is dependent on electrical charge. This encompasses almost all of neuro-physiology as well as chemo-physiology.

- The Müller proton wave, from the early 1980s, which we need in order to explain transfer of energy as well as information in the external environment of the body physical. The proton is needed to explain biochemistry as well as the electron and photon. The Müller wave is a double wave and looks like an egg carton. It is logarithmic in nature.
- The ovoid or human body-field wave, from 3,500 years ago, developed from the solid geometry favoured by the ancients. This is the most interesting of all the waves. It may be ovoid in shape, rather than a sphere. It is a standing wave in space which links to the Maxwell wave as well as to the Müller wave, with quantum characteristics. It has to explain specific patterns of transfer of information as well as of energy that the electrical model simply cannot do. The idea of the human body-field wave, then, is derived from very ancient sources and explains the structures and functions in space that are part of energetic medicine.

Therefore, in 2011, I began the process of superimposing the ideas of Hamer and those of NES Health, all the time looking for coherence. The results were sensational and are why we are having this lecture today. The following images are of the three completely different waveforms that I tested for coherence (by this I mean the possibility of communication existing between them).

- Hamer's two parts of an electrical wave:

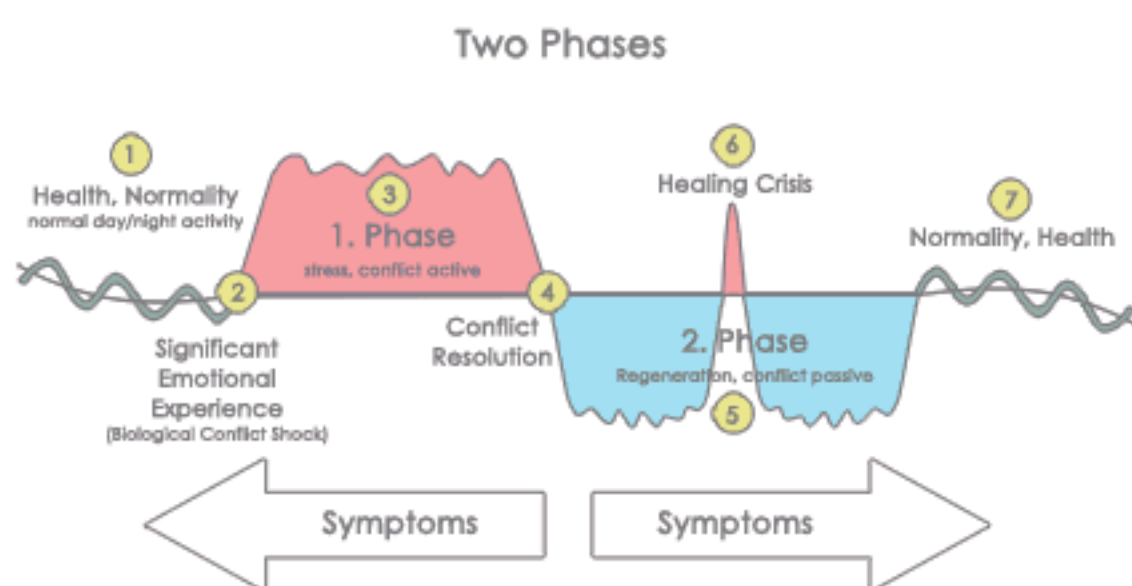

Figure 5: Hamer's two phases

- The Traditional Chinese Medicine in the NES human body-field:

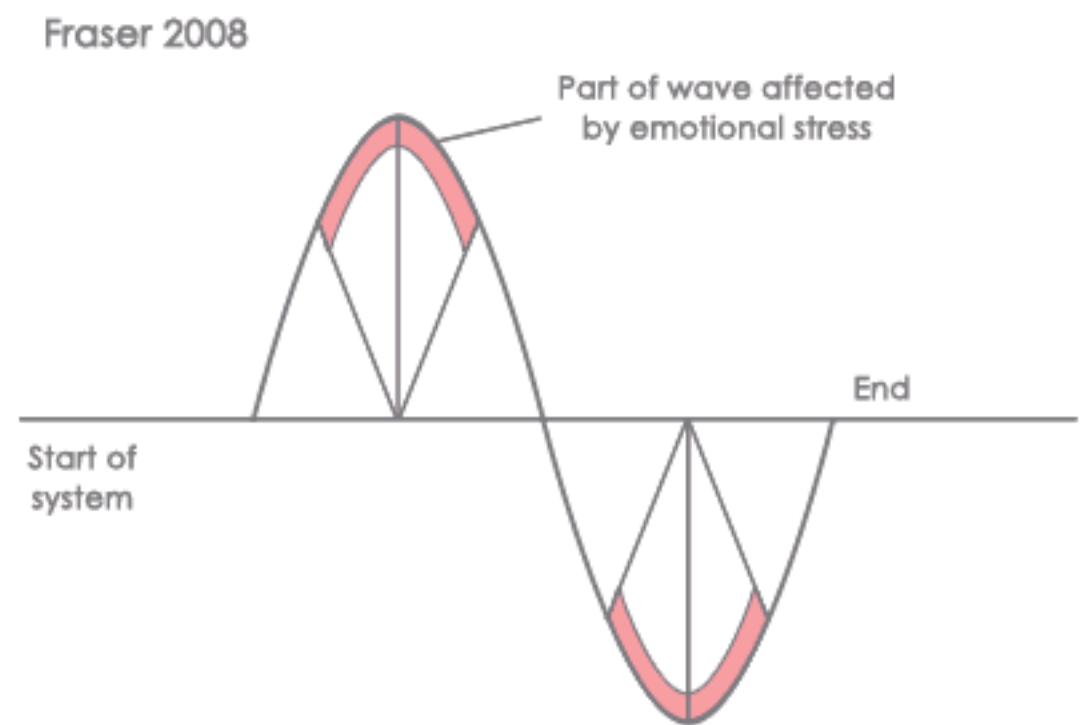

Figure 6: The phases of Chinese medicine drawn on a logarithmic wave

Figure 6 is not an electromagnetic wave but a three-dimensional standing wave in space. In this ovoid wave, we find six segments of 60° , resulting in 360 degrees. In Traditional Chinese Medicine we have five elements, but Fire phase is made up of two types, Fire of Heaven and Fire of Earth, so making six elements in effect. When we say 'elements', we are talking about stages of change. The energy of Fire of Heaven is reflected in the energy of Fire of Earth as the wave changes polarity. If we look at the diagram of Hamer's two phases (see Figure 5), we can see that the peaks of the wave are omitted. These are the two Fire phases, which in the NES method we see are damaged by conflict between emotions. We can say that when you are in a coherent emotional state, that is, not in conflict, all stages of change are equal, all are at 60° . When this occurs, there is coherence and then health is possible.

- The wave of Dr Müller describes the waveform created by sub-atomic particles in space:

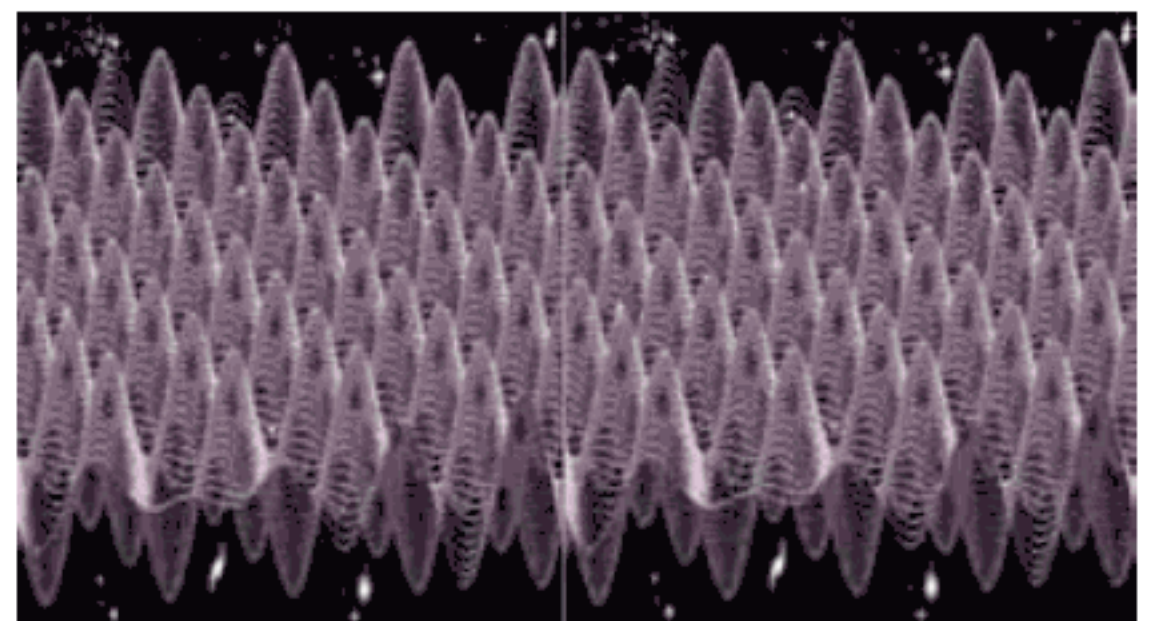

Figure 7: The Müller wave representing the proton

This is the wave wherein Dr Hartmut Müller in 1984 described the wave function in space of sub-atomic particles, and this is basically the proton function because of its much greater mass than other particles. This wave also appears to be the basis of coherence, which appears in nature when in its resting state. It is the basis of a framework that gives coherence to a lot of information by its actual structure. In this lecture we are looking at structure and coherence and the Müller wave. If there is naturally occurring coherence in nature, that is because there is a waveform connecting all parts of space. I am not only looking for coherence, but also for structure. The Müller wave provides this.

The Müller wave, I found, only Space Resonance Matched experimentally with the NES Info-ceuticals when the waveform was divided into two pictures. This meant that it was a double wave. In the NES system we propose that the first wave is physical and hence is related to bio-chemistry, and the second wave is metaphysical, being exactly the same but in a different place. I propose there is a metaphysical wave which at last explains the human body-field, linked to the function of the nervous system. Hence we find a match with the NES method and the Müller wave.

We can now understand how there can be a physical as well as a metaphysical human body-field.

It is true that these three different waves that I have described above are not related, because they originate from very different sources. But they have coherence although they describe symptoms of disease (Hamer), the six elements of Chinese medicine (Fraser) and the function of the standing wave in space (Müller). In physics, interaction of waves is not a strange idea at all. Hence it is not surprising that these waves communicate at the energetic level.

I am simply saying again that the Maxwell wave, or electromagnetic wave, and the other waves cannot be separate from one another.

During 2011, I did some experiments and I discovered that the 12 meridians of acupuncture, in the form of the Energetic Integrators of NES Health, form a Space Resonance Match with the Müller wave. The HBF is not the same as the Müller wave, but these two waves can communicate. Therefore, I decided to draw a diagram of the Chinese meridians so that they were a superimposed ovoid wave of Traditional Chinese Medicine. I tested all the specific locations and the order in space showed

very strongly. The meridians actually appeared in the diagram in the order given in Traditional Chinese Medicine. How could that be? This is because there exists an order in space, a special structure. The Space Resonance Match phenomenon works for solid geometry. In other words, we can get it to work visually as well as mathematically. This is how this information was obtained - by visual Space Resonance Matching! Now we can take a look at this key diagram (see Figure 8 below).

It was for me a great mystery that the 12 main meridians formed a series of undulations in the internal structure of the ovoid wave and appeared in a particular order. But there is an idea in Chinese medicine that gives us an explanation of the origins of the energetic system in humans. This idea is more than 3,000 years old. But today we can take it and place it in a waveform and it works better like that.

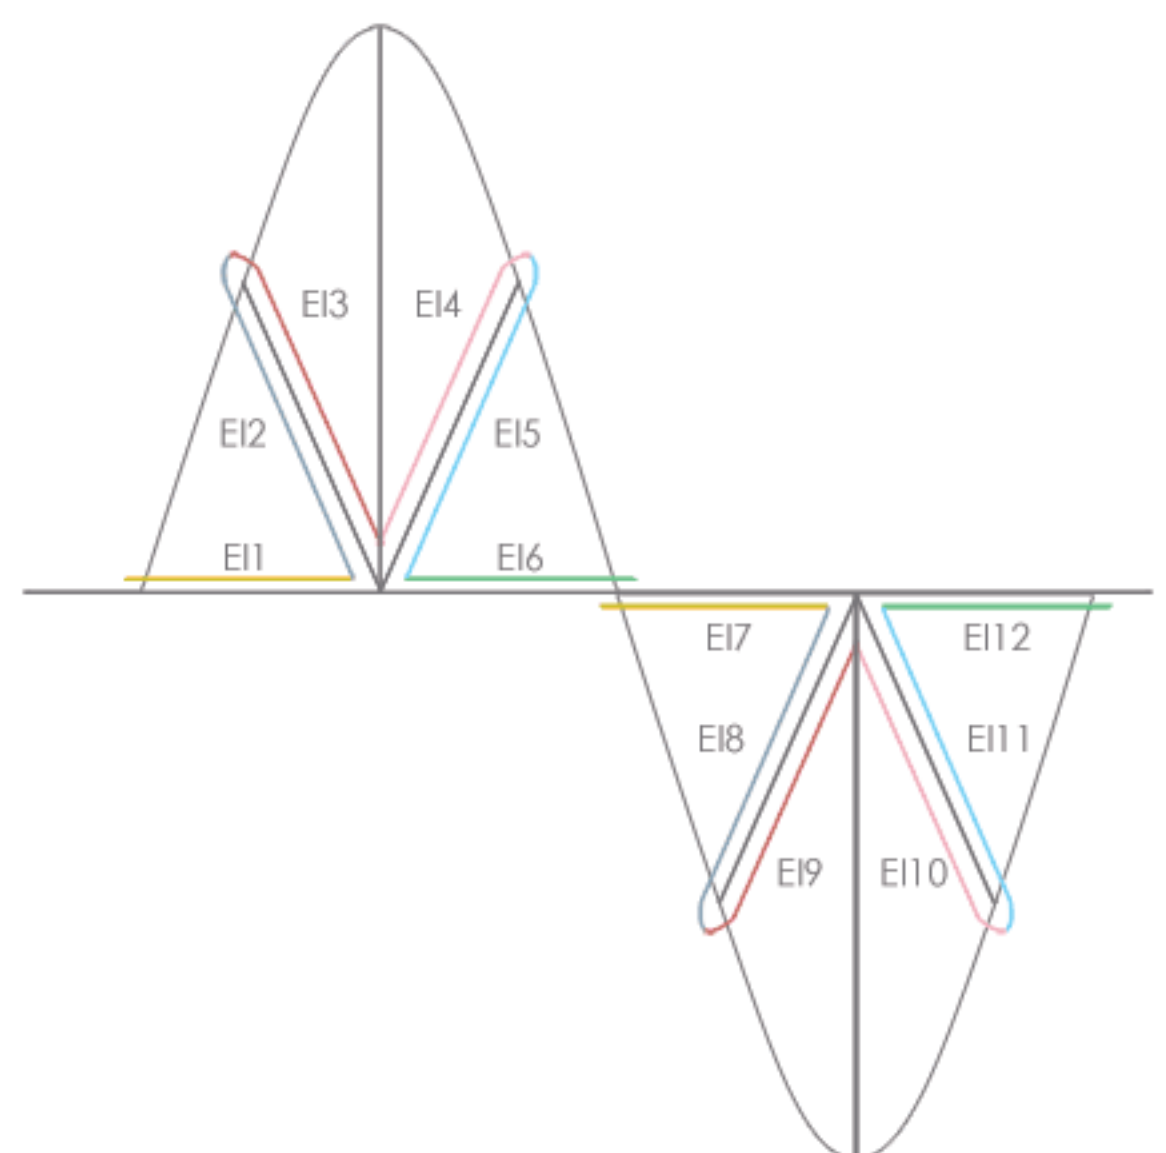

Figure 8: The body wave and the 12 meridians of acupuncture

The acupuncture meridians have a specific order and when I drew them on the ovoid wave, they followed this order, as already mentioned. The 12 meridians appeared around the axes, so I began to wonder what these axes were. Because I studied Traditional Chinese Medicine for so many years I thought I knew. But I didn't know anything.

Why? Because it turned out that we can go way beyond current TCM theory by simply following the SRMs that occur with the ovoid wave. We can now explain the existence of the eight extraordinary meridians from traditional acupuncture by showing that they are a sort of axis, related, no doubt, to human embryology studies.

The Embryo as an Egg

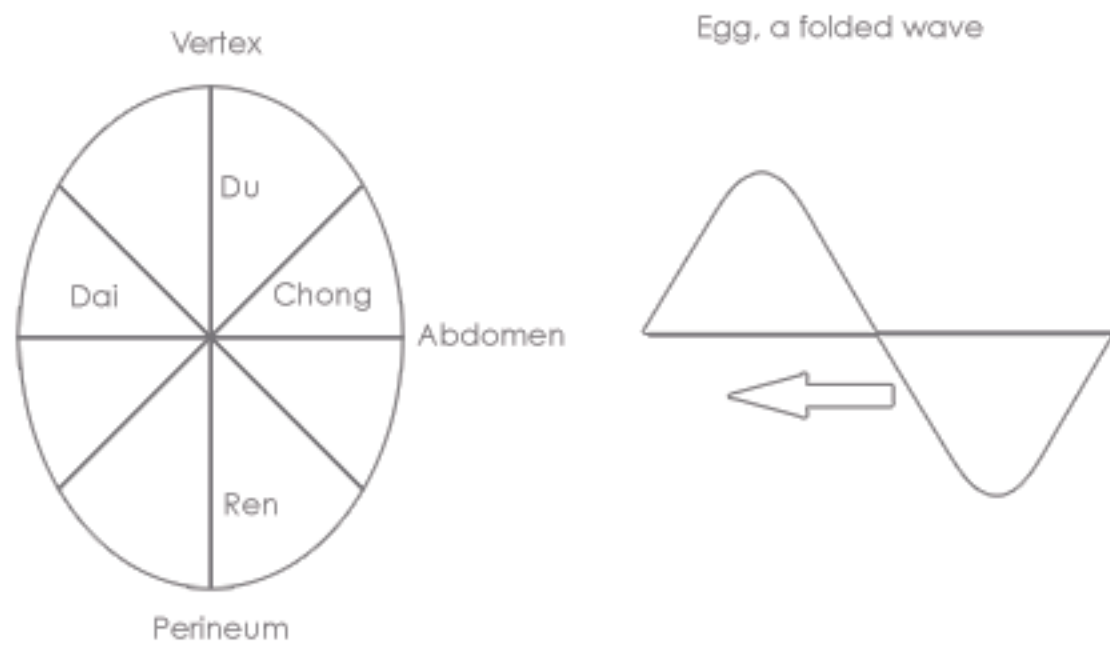

Figure 9: The embryo as an egg

This shows the eight extraordinary meridians of Traditional Chinese Medicine as slices of an egg. Each slice is folded and is of 60°. The lines represent the primitive meridian system of eight axes. The meridians form around these axes. In the Hindu and Chinese traditions, everything goes back to the egg. From this diagram, we see the wave folded backwards to make an egg shape. The axes Du Mai, or Governor Vessel, and Ren Mai, or Conception Vessel, form the primordial meridians, the guiding force in embryology. Astonishing!

Of course, we can then superimpose the Hamer disease phase diagram directly onto our diagram which outlines the full body wave, with the meridians located on it. When we do this, we are doing what the great Charles Darwin did to get to his theory of the origin of species. Is it valid to use Hamer's electromagnetic wave with the other waves? Yes, because the real wave is needed to support the quantum wave! The virtual travels on the real.

We have to find the underlying coherence and order in something that looks quite chaotic. The final part of my scientific procedure is to get coherent data to produce new data then test them to see if they work clinically. Trying to see through and beyond the apparent chaos was mind-numbing! But I found an inherent order in 2011.

When we use the part of the mind that is more analytical and critical, we see that the Müller wave explains the structure in space. Meanwhile the egg of Chinese medicine explains the structure within the body. It is evident that they are linked in terms of energy.

Changes in the cosmos affect the activity of the body's meridian system. The Chinese knew this 3,000 years ago.

The Shock of Hamer's Model - What is It?

We can now look again at the model of a wave presented by Dr Hamer. In it, he explains that shock can initiate a certain type of disease and that there are phases of recovery that follow a set pattern. There is a problem of course. What is shock? I do not see it as a biochemical phenomenon, I see it as the absence of coherence - one bit of information does not relate to another bit of information. This is shock, of course. But there are different types of shock and some shocks cause chronic disease while other shocks clearly do not. Also, some people are exposed to shock and do not get sick, while others do, so we must have some kind of shock protection mechanism. The people in Meta-medicine think that it has to be a shock for which you were not prepared that causes you to get sick. I set up an experiment with 14 types of shock and used the energetic number sets provided by the late Dr Copen of England to test the different types of shock:

1. Shock from burns
2. Electrical shock
3. Emotional shock
4. Financial shock
5. Haemorrhagic shock
6. Insulin shock
7. Mental shock
8. Physical shock
9. Toxic shock
10. Psychological shock
11. Sexual shock
12. Spiritual shock
13. Surgical shock
14. Shock due to accident

Out of all the above, only emotional shock registers by SRM in tests on the many so-called stages of cancer in what we may call the orthodox model of cancer. I wondered what 'emotional shock' could be, since it represented a very specific reaction or response to shock that Dr Copen, the author of these test numbers, had found. I thought it might be shock against the Heart Cavities, so I also tested ED6 Heart Driver. For emotion, too, I tested ES8 Chill to see what happened.

Emotional shock was the only type of shock to link to ED6 and ES8 Infoceuticals. But more astoundingly, all three linked energetically to every stage of cancer. Interesting. Fascinating. One hundred per cent correlation in science has to be important. This is the key.

Order	Ampoule Name in Cellular Theory of Cancer Development	SRM Emotional Shock	SRM Heart Driver ES6	SRM Chill ES8
1	Normal Cell	No	No	No
2	Cell Dysplasia	Yes	Yes	Yes
3	Early Stage Benign Growth	Yes	Yes	Yes
4	CIN-1	Yes	Yes	Yes
5	CIN-2	Yes	Yes	Yes
6	CIN-3	Yes	Yes	Yes
7	Transformation to Malignant	Yes	Yes	Yes
8	Primary Malignancy	Yes	Yes	Yes
9	Later Stage Primary Malignancy	Yes	Yes	Yes
10	Secondary Malignancy	Yes	Yes	Yes
	Coherence	100%	100%	100%

Figure 10: Coherence in cancer model 2011

At NES Health we think emotional shock triggers a reaction in the HBF that later is translated into a problem with the cell activity. It starts to become clear that shock affects the wave, possibly because it inhibits the heart's ability to imprint information. I found that in one case, a person with cancer had only 30% imprinting function. Unfortunately you cannot stop cancer or arthritis simply by using ED2 Imprinter Driver. I wondered why this was so. Obviously we had to treat the original shock. If we use ED6 Heart Driver and ES8 Chill we can stop the shock a little bit, but not entirely, so I began to look for a way to remove the shock entirely from the system.

Failure to Control Growth

After years of investigation I can, broadly speaking, say I am in agreement with Dr Hamer. From his study of embryology, which was very deep, he found that shock caused loss of control of growth. To throw more light on this theory, I took a test item for 'emotional shock' and discovered that there were relations between it and various diseases which result from failure to control growth. Here are some examples.

Many incurable and incomprehensible diseases are simply those where tissue grows too much or too little or in the wrong place. None of us can cure any of these diseases because we don't know how to stop absolutely the shock and its ongoing side-effects on the HBF.

- a) Tissue plus, cancer of all types, polyps.
- b) Tissue minus, sclerosis of all types, including multiple sclerosis.
- c) Arthritis, excess growth of bones or insufficient growth of capsules.
- d) Psoriasis, excess skin growth.
- e) Diabetes: tissue minus and tissue plus at the same time.
- f) Fibrosis of all types are tissue plus.

List of Tissue Plus and Tissue Minus Conditions

Anal fissure	Mediastinal tumour, carcinoma and sarcoma
Anti-shock	Medullablastoma
Arthritis	Melaena
Bone cancer	Melanocarcinoma
Brain tumour	Melanosarcoma
Breast cancer	Multiple sclerosis
Cancer of Omentum Majus	Muscle wasting, progressive
Cancerous ulcer	Myelosarcoma
Carcinoma generally	Myosarcoma
Cerebellar tumour, carcinoma and sarcoma	Neuroblastoma
Cerebral tumour, carcinoma and sarcoma	Neurofibroma
Cervical fibrous tumour	Neuroma
Cervical polyp	Osteoarthritis
Cranial tumour, carcinoma and sarcoma	Osteomyelosclerosis
Diabetes, insipidus, mellitus and phosphatic	Osteo-sinusitis
Ear sarcoma	Pancreatic cancer
Emotional blocks	Pelvic cancer
Emotional shock	Prostate cancer
Encephaloid cancer	Psoriasis
Fibroadenoma, breast and arachnoid	Pyloric cancer
Fibromyoma	Renal polyp
Fibrosarcoma	Renal polyp, malignant
Fibrosis	Sarcoma myeloid
Fibrous tumour	Sarcoma of the nose
Fibrously degenerated heart	Sarcoma orbital
Fissure	Skin fibroma
Gummy tumour	Spinal tumour, carcinoma and sarcoma
Hip sarcoma	Spindle cell sarcoma
Hodgkin's disease	Splenic cancer
Joint stiffness, ankylosis	Stomach cancer
Leukaemia	Stomach polyp
Lung cancer	Testicular cancer
Lymphadenoma, adenoma	Uterine cancer
Lymphogranuloma, benign	Uterine fibroma
Lymphogranuloma, inguinal or ventral	Uterine polyp
Lymphosarcoma	Uterine sarcoma
Mammary fibromatosis	Vaginal polyp
Mammary sarcoma	Voice box arthritis

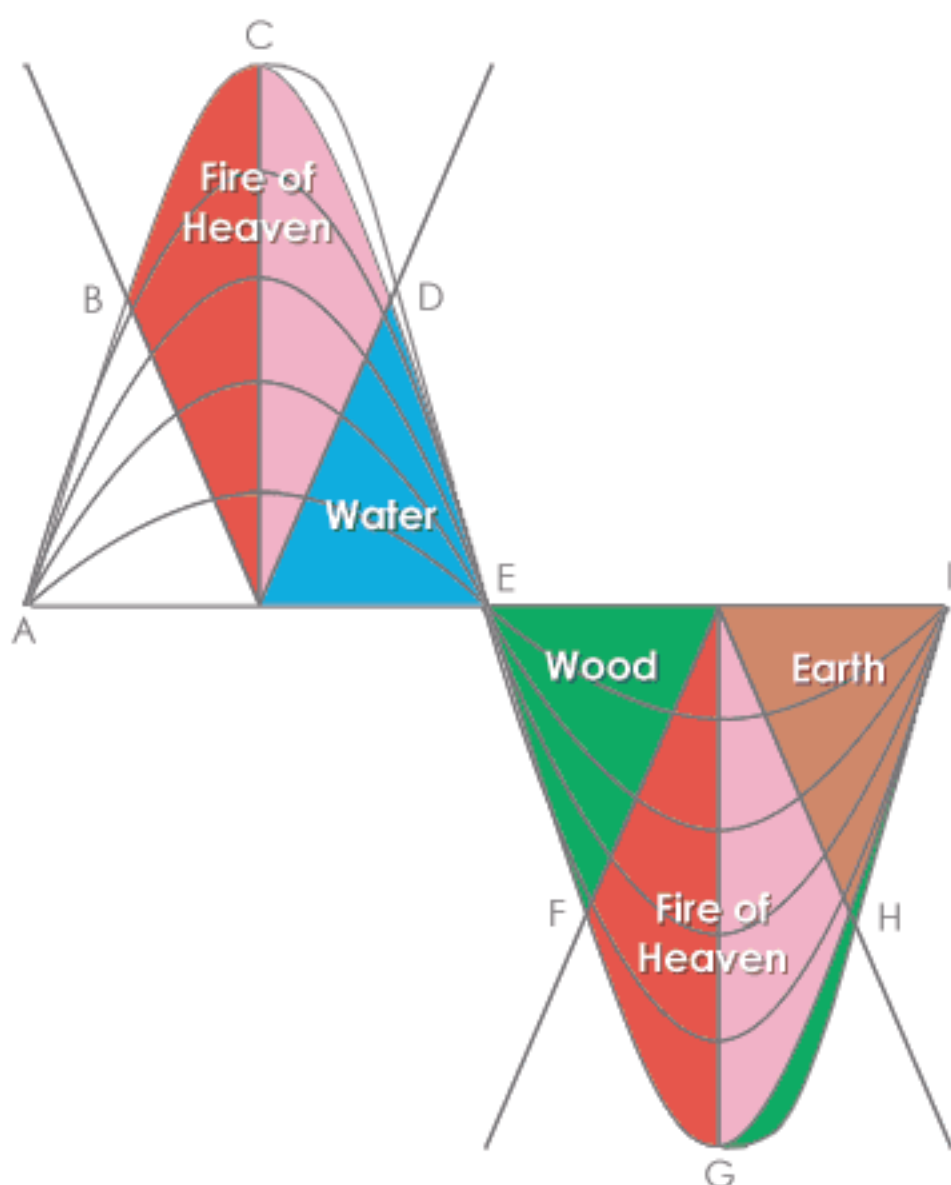

A Map of the Chinese Ovoid Wave and its Stages of Phase Change Related to Disease

Here I superimposed the ovoid wave of Traditional Chinese Medicine with the Hamer nervous system wave and then added the information that it carried.

The disease begins, it is quite certain, as an emotional shock marked 'A' in the next diagram. When you think about it, shock is information (incoherent information) and I am sorry, but physicists say that information is indestructible. It cannot be destroyed. It is only possible to change it slightly by changing the location, or orientation. Or by changing it to another form of energy, like heat. So how can we get rid of shock? If only we knew, we would have the greatest medical revolution that ever happened. Well, I can say that we are very close!

This shock begins, without doubt, as an auditory shock, something you hear said. Of course it can be visual in nature as well. The emotional heart shock removes the top of the wave at 'C'

and so stops or disrupts imprinting and also disrupts the throat chakra (a chakra is a series of spherical waves situated in front and behind the spine, as described by the yogis of India over 700 years ago). This has already been discovered and can be seen working in Neuro Linguistic Programming (NLP), which tries to deal with shock by vocalisation and honesty. We can also see Matrix Reimprinting using EFT being used to reimprint information in the heart. These are people looking into ways to correct shock.

Part of the Wave
A. Initial Emotional Shock
B. Fire of Heaven for Heart
C. Imprinting/Chakra 5
D. Conflict Resolution, Initial
E. Pivot - Change to Healing Phase
F. Later Conflict Resolution
G. Correction to Pericardium
H. Emotional Crises in FGH Region
I. Resolution of Disease, Healing

Figure 10: Stages of disease

In Chinese medicine, energy moves from Metal to Water and likewise from Wood to Earth, but we can see from the diagram that Fire of Heaven controls the progress from Metal to Water and Fire of Earth controls the movement from Wood to Earth. The Fire elements are crucial. This is interesting, since we now suspect that these 'Fire' phases represent the genetic information base of the body.

So, we have to correct shock, we have to correct imprinting and we have to resolve conflict. We can meditate, chant 'OM', try to talk to our parents - there are many ways that don't work. I am trying to find something more effective.

Science is a process of the continuous refinement of knowledge. It is not stationary. In this respect, by October 2011 it was clear that the Müller proton wave linked to specific parts of what I call the human body-field spherical wave, based on Chinese sacred geometry from antiquity. They do not really overlap at all. Astonishingly, the connection between the Müller wave and the HBF wave seems to explain what the Chinese have referred to for centuries: the peaks in activity in the 12 meridians at specific periods during the day and night. You can see in this diagram that Fire of Heaven links to the Müller wave, as do all 12 organ meridians. Our meridian system is so responsive to what is outside us!

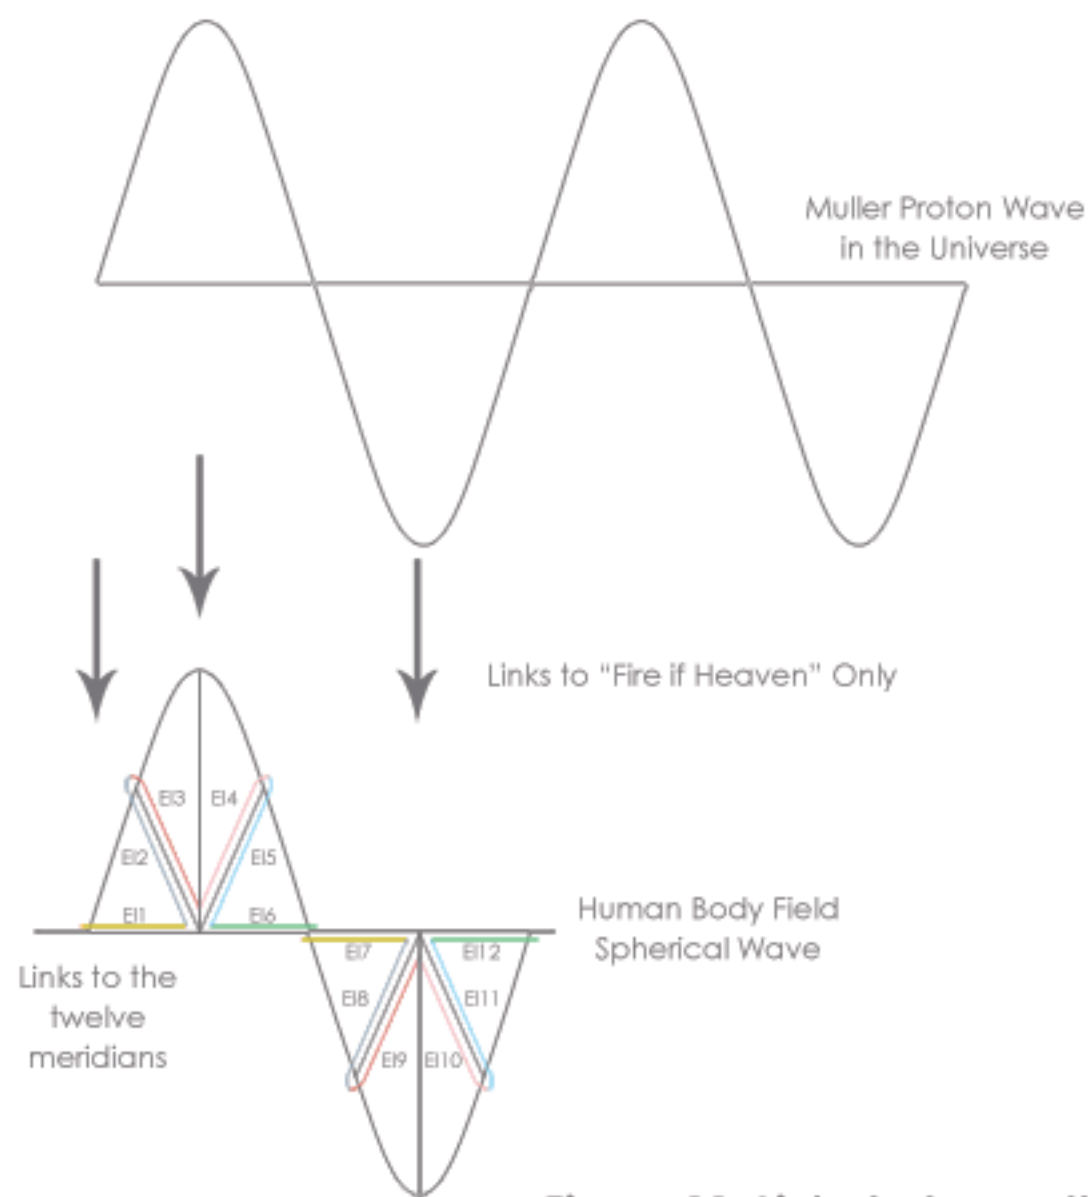

Figure 11: Links between the Müller wave and the HBF

Active Phase Framework

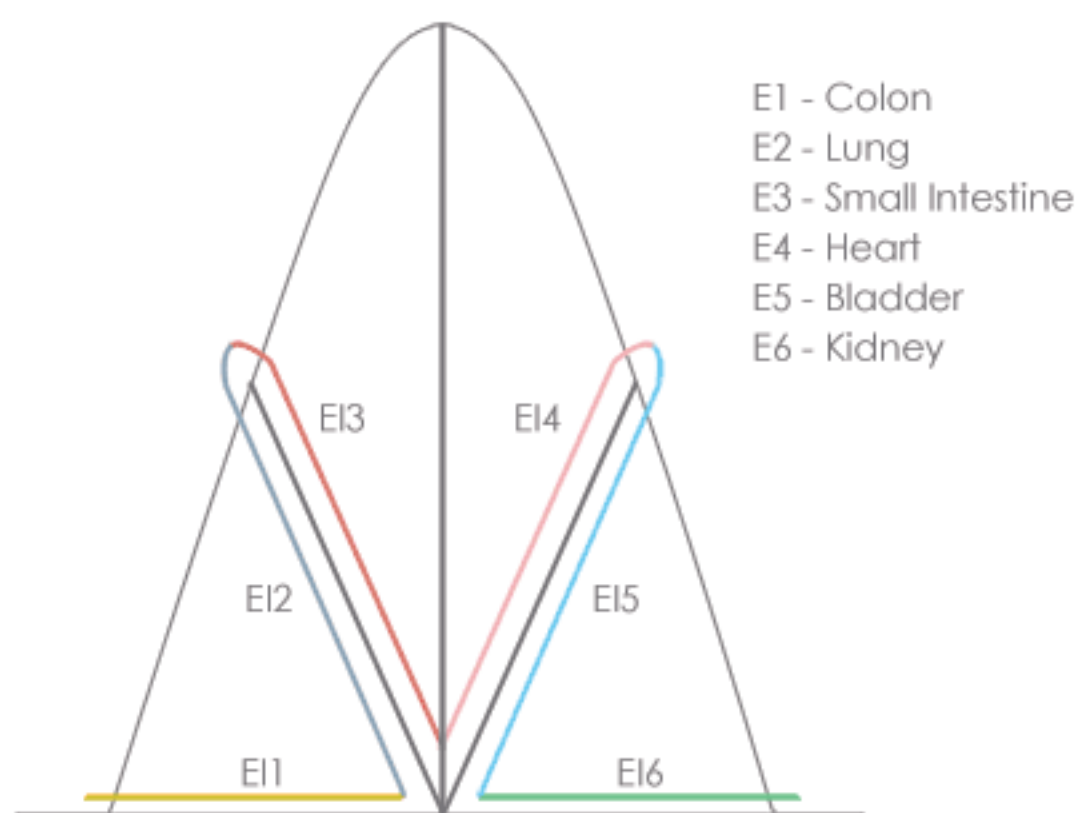

Figure 12: Framework of the active phase of disease

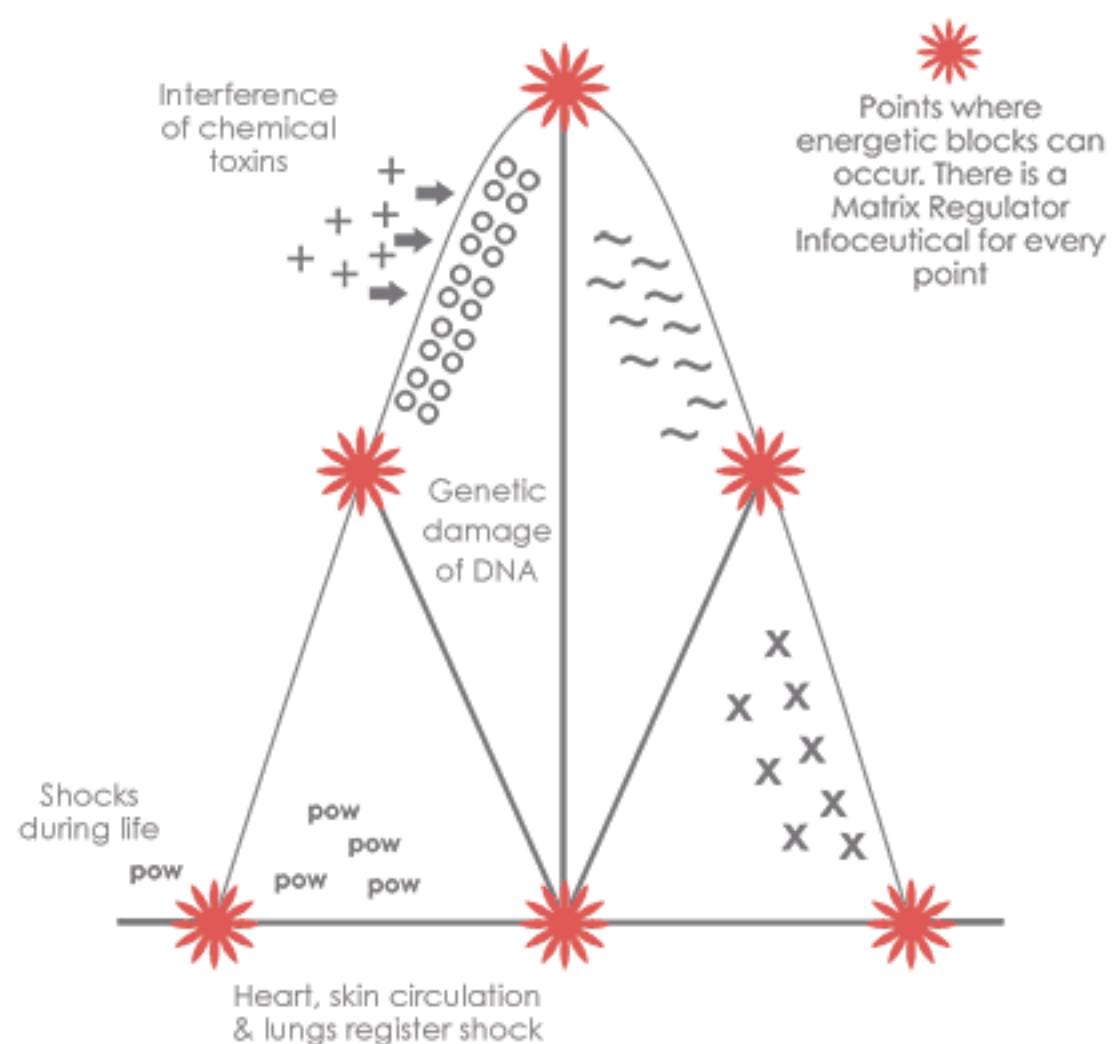

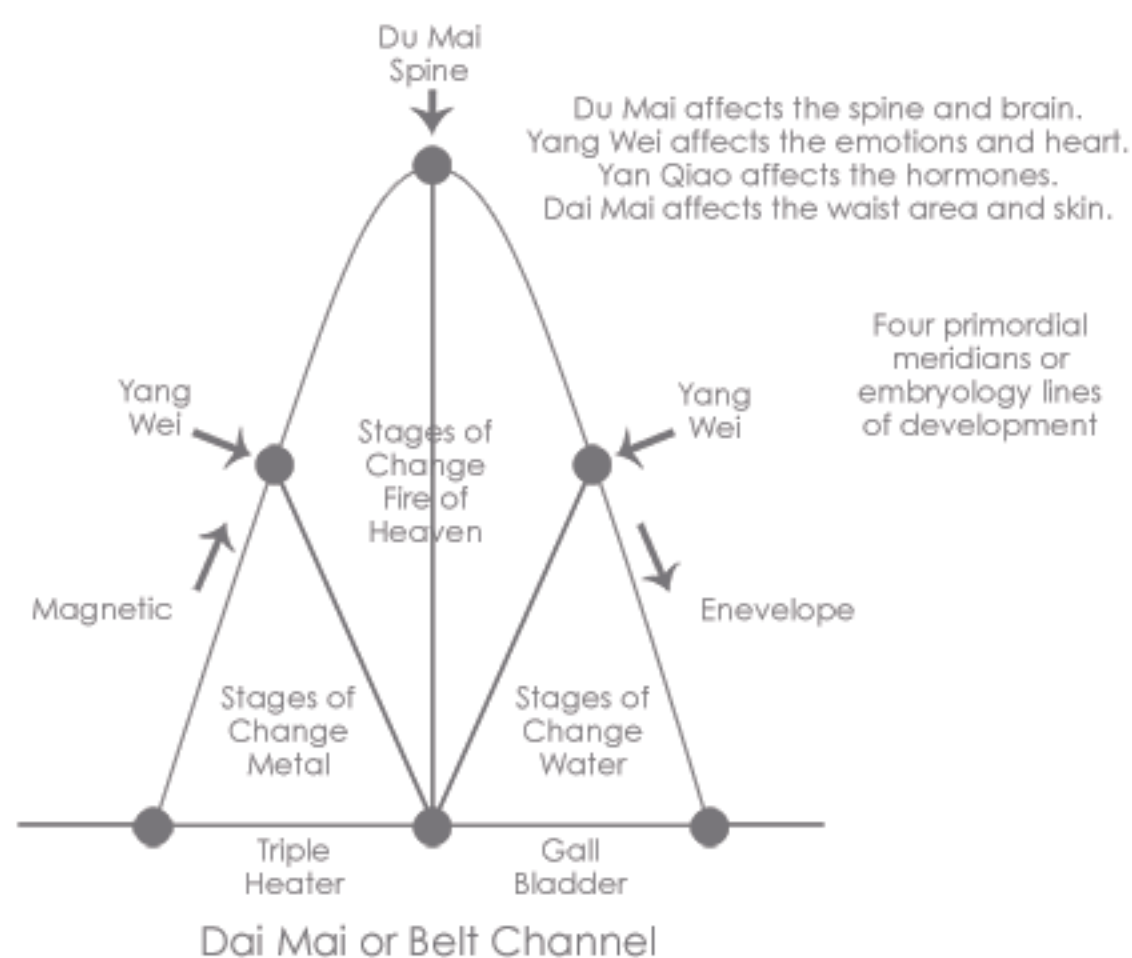

The first six Energetic Integrators and the active phase of disease are arranged around the four primordial meridians. These are the point at which we can influence the wave. These meridians are affected by active disease state and should be treated first in NES therapy.

The Superimposition of the Chinese Ovoid Wave and the Electromagnetic

We start with the carrier wave, the magnetic envelope. The Infoceutical ESR functions by correcting this only, but that is 90 per cent of everything. The points where the axes meet the magnetic envelope are where the phase changes in the wave.

The horizontal and vertical axes relate to the four primordial meridians, the internal ones which do not have any acupuncture points. There are four more primordial meridians.

Framework of the Active Phase of Disease

- pow** 100, 000 Shocks
- 24, 000 Bits of Genetic Information
- +** 100, 000 Toxic Environmental Chemicals
- ~** Event Memory Energetically Linked to DNA Memory
- X** Conflict Development from two Previous Sectors

Figure 13: The active phase activity

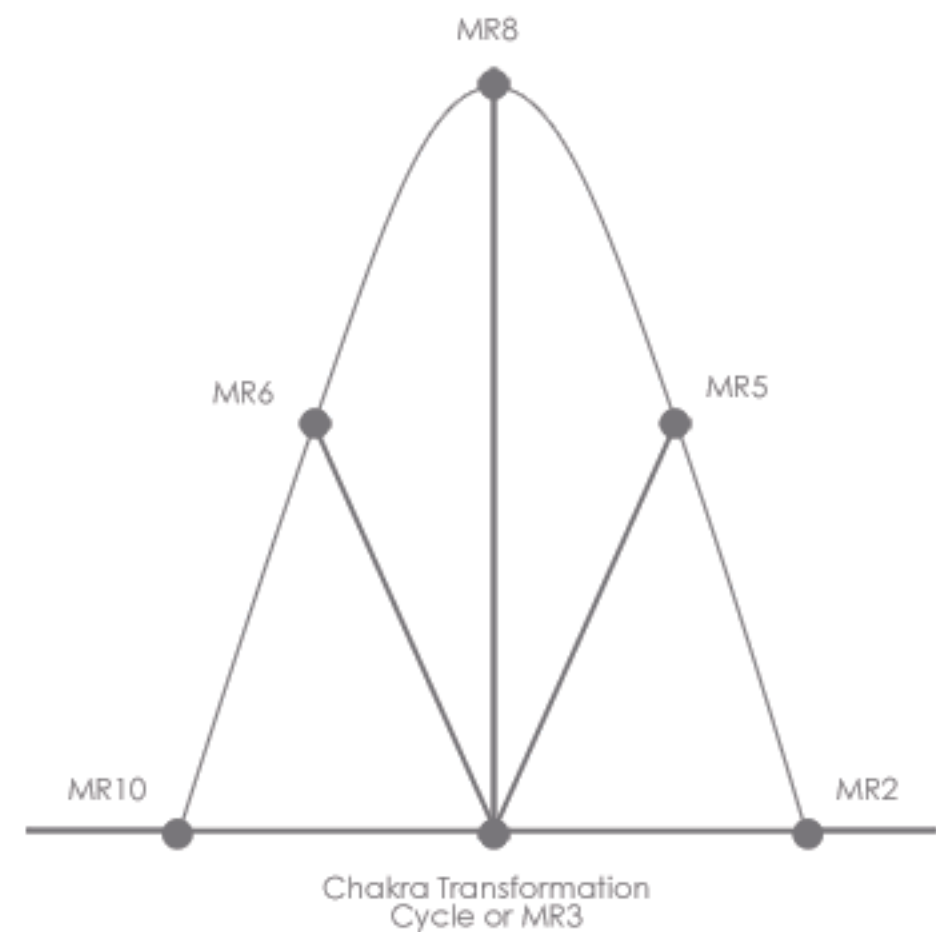

We describe here the qualities of each section of the development of a disease of the matrix. It links with the theories of Dr Hamer, and shows what happens in each segment. In the information world, we enter the level of metaphysics - information in our heads that we can't quite account for. But remember, information is indestructible and so this is where we can come across all sorts of unexpected information from past lives or other people's lives, not just our own. In the Fire of Heaven section we find a link to genetics, to DNA, and that chemical toxins can change genetic information, thereby damaging the heart and small intestine most of all. From this picture we can see that event memories, memories of our life, can affect genetic information. Extraordinary! Finally, in the Water section, we find conflicts developing from the previous sections, and it is these conflicts we need to resolve.

The Punchline of Coherence: The Matrix Connection

Years ago I developed 42 Infoceuticals during basic research to help a friend who had cancer and I had no idea at all at the time that they might have a common thread. Many years later, I tested all of these Infoceuticals again and found that 10 of them formed a Space Resonance Match (SRM) with the test item for the matrix. That was in 2008, after the idea of the matrix received such prominence from biologists at the now famous Copenhagen Conference.²

These 42 original formulae eventually went to make up the 10 Matrix Regulators that we use today. Now NES Health is using them as the basis of a system of removing blockages in the human body wave. As Dr Hamer says, tissue plus and tissue minus diseases are about the function of the matrix in the body-field. The matrix is in fact a system of cellular and extra-cellular fluids in the body, as proposed in 2001 by Dr Gilbert N. Ling, belonging to the protoplasm of the cell. The theory is made up of ideas about layers of structured water. But it is no longer 2001. It now appears, in 2011, that the Müller proton wave proposed in 1984 travels via this fluid matrix in the body. What I have done is to combine these ideas, and we now have a theory that encompasses many others concerning the causes of disease. The matrix sometimes needs reconnecting, because the amino acids become corrupted by chemical toxins. I say this on the basis of many hours of experimentation.

Active Phase Correction using Matrix Regulators

Corrections
The transformation cycle will affect all. Dai Mair and ESR will affect all. Or use MR3 to correct and also restore function.

Order	Number	MR Name	New Comment
1	MR10	CNS-Heart-Matrix	Links head and heart
2	MR6	Reconnection	Links damaged switches and drop-outs.
3	MR8	Nerve Cell Cone Regeneration and Amino Acid Correction	Repairs nerve damage
4	MR5	Harmony	Event-DNA memory harmony
5	MR2	Calm Mind	Resolution of conflict
6	MR3	Restore Matrix	Correction of errors

Figure 14: Matrix Regulators, active phase

We use the MRs in that order, with the aim of re-establishing coherence. These are now available on the NES miHealth. You will notice that the focus of this section, connecting to all parts, is MR3, or the Chakra Transformation Cycle. This is a cycle on the NES miHealth which runs through all the chakras in order.

If you are going to get better, you need to change. We are not going to hand out chemicals. The change is the integration of information into your life - you have to reconnect with the information.

When we treat a disease with the series of Matrix Regulator Infoceuticals in the correct order, many changes can be seen in an active disease. The key to the system is the life memories, the recollections held in the chakras that are linked energetically to the matrix. My 28 years of experiments show that there is a relationship between the memories of your life and your disease. It is best to treat the chakra system as a whole.

The key to the system appears to be your life memories and the fact that some of these memories don't fit with who you think you are or who you would like to be. You can study the Upanishads in Sanskrit, which are about the storage of information in your life, and get mystical diagrams. Ancient Hindu thinkers assembled this information from meditation. Scientists find out what is actually happening.

I developed Infoceuticals for each of the chakras and they are all linked to the bladder divergent meridian, to Trust, the chakra that is the basis of our life, and to a point on the lumbar spine called Ming Men. The heart divergent meridian, the small intestine and the heart meridians all link to the chakras as well. It is all about Charisma, your presence.

It is also important to correct the physical heart, as it is the heart that has the job of integrating information. We can do this with a healing cycle

Figure 16: Transformation with the chakras

Correction When There is No Resolution of the Disease

There are various cyclic treatments that are holistic and will affect everything. The cycle of Full Matrix Regulation can be used to activate all of the body's healing programmes at once.

Linked to this is the metaphysical cycle of healing, the second Müller wave in fact. This leads to a final transformation, right at the end of the cycle, where the incoherent parts of your life can be finally incorporated into your life without stress.

What happens when you decide to transform - and you can do so by using these cycles - is not always very comfortable, and your client will have to be prepared for some changes to occur. So let's look at physical regeneration, to be found in the first Müller wave and its corresponding Chinese ovoid wave.

Regeneration Phase Framework

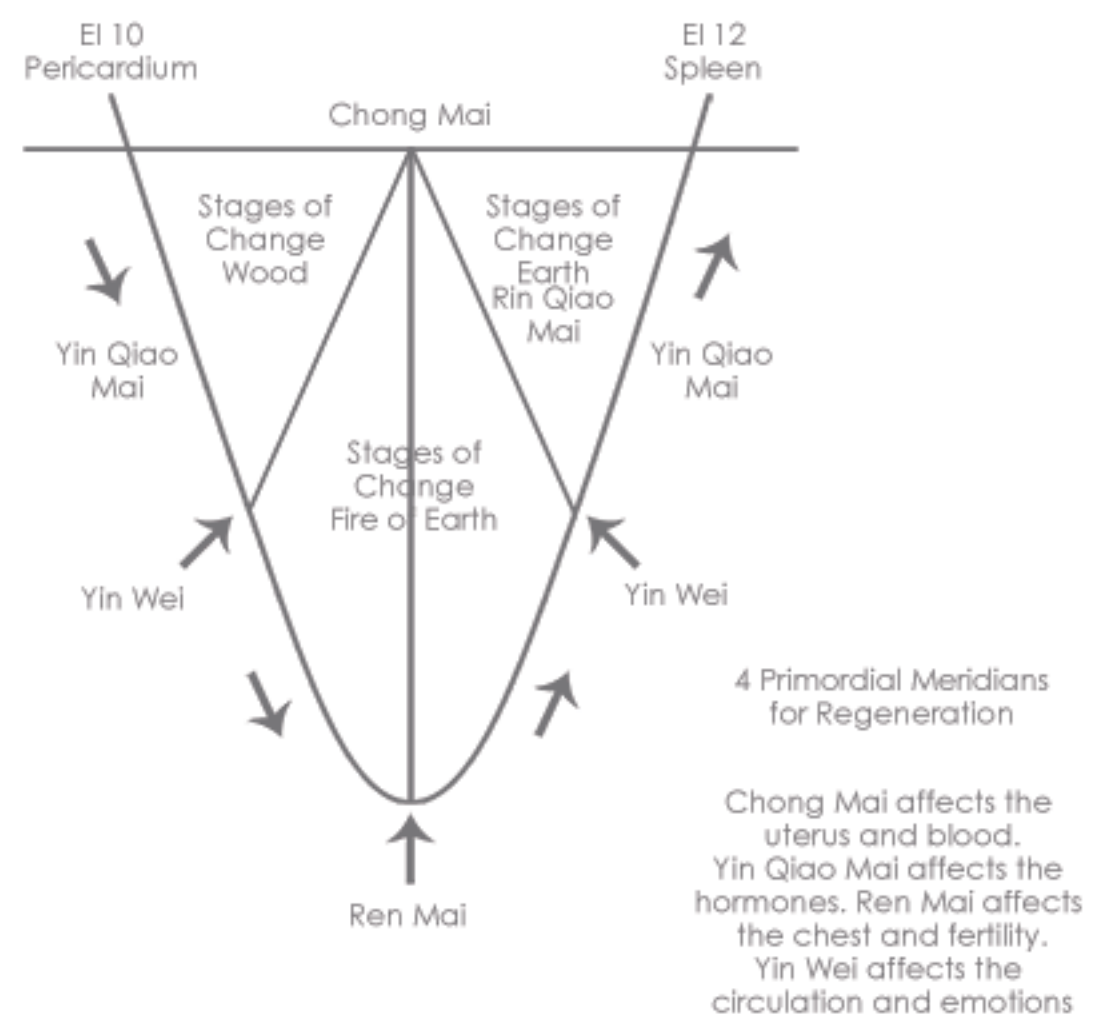

Figure 17: Framework of regeneration phase

Information appears to move directly from Wood to Earth, but Fire of Earth is the control.

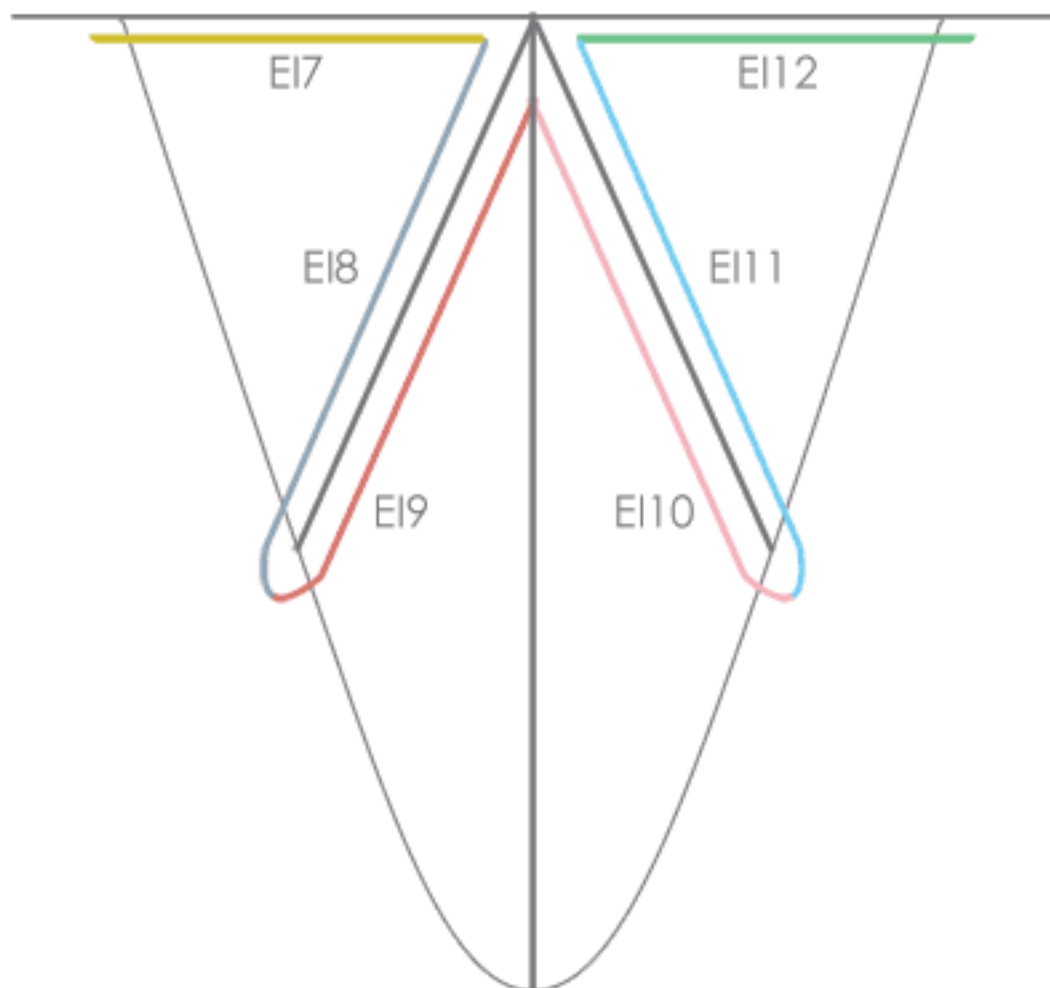

These meridians affect these areas in a very general sense only.

The focus of this phase is the cell with ED3 Cell Driver or Biocell on the NES miHealth.

This is used for the treatment of abscesses as part of the healing process.

Regeneration Phase Meridians

Information flows along lines of connective tissues in the matrix, which is continuous. The meridians concerned with regeneration are the gall bladder and pancreas. This is why diabetes is so difficult to correct. The shock comes right through to the Earth phase and also affects the pericardium and circulation, and diabetes affects the whole wave. Asthma, initially at least, affects only the beginning of the wave, Metal phase.

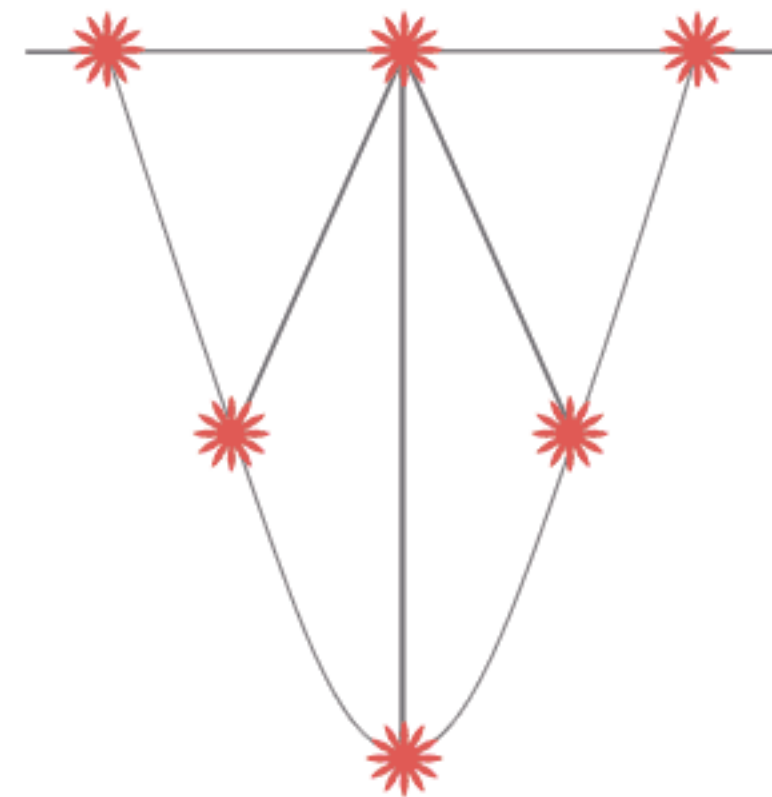

Key:

- EI 7 - Gall Bladder meridian
- EI 8 - Liver meridian
- EI 9 - Three Heater meridian
- EI 10 - Pericardium meridian
- EI 11 - Stomach meridian
- EI 12 - Spleen/Pancreas meridian

These meridians are used in regeneration phase treatment.

Figure 18: The meridians of the regeneration phase

Regeneration Phase Activity

- Conflicts large and small. One big or many
- ✓ Energetic Terrains, mimic micro-organisms
- Nasal and Paranasal focus of disease
- Veriform appendix focus of disease
- * Many emotions coming to surface
- = Regeneration of Tissue

Figure 19: The activity of the regeneration phase

So what happens in each part of the wave when you are healing? We have our little conflicts, or maybe one or two large ones, and these pop up as they are being resolved. The ETs are in the second section and now at last we understand them. I agree with Hamer, who says that the body actually produces viruses, bacteria and moulds in an attempt to heal itself. Homoeopaths have said this for nearly 200 years. (Whether these are real bacteria or pictures of them in an energetic sense is yet to be researched.) Nothing much in medicine is new! We just find a new context for the same information.

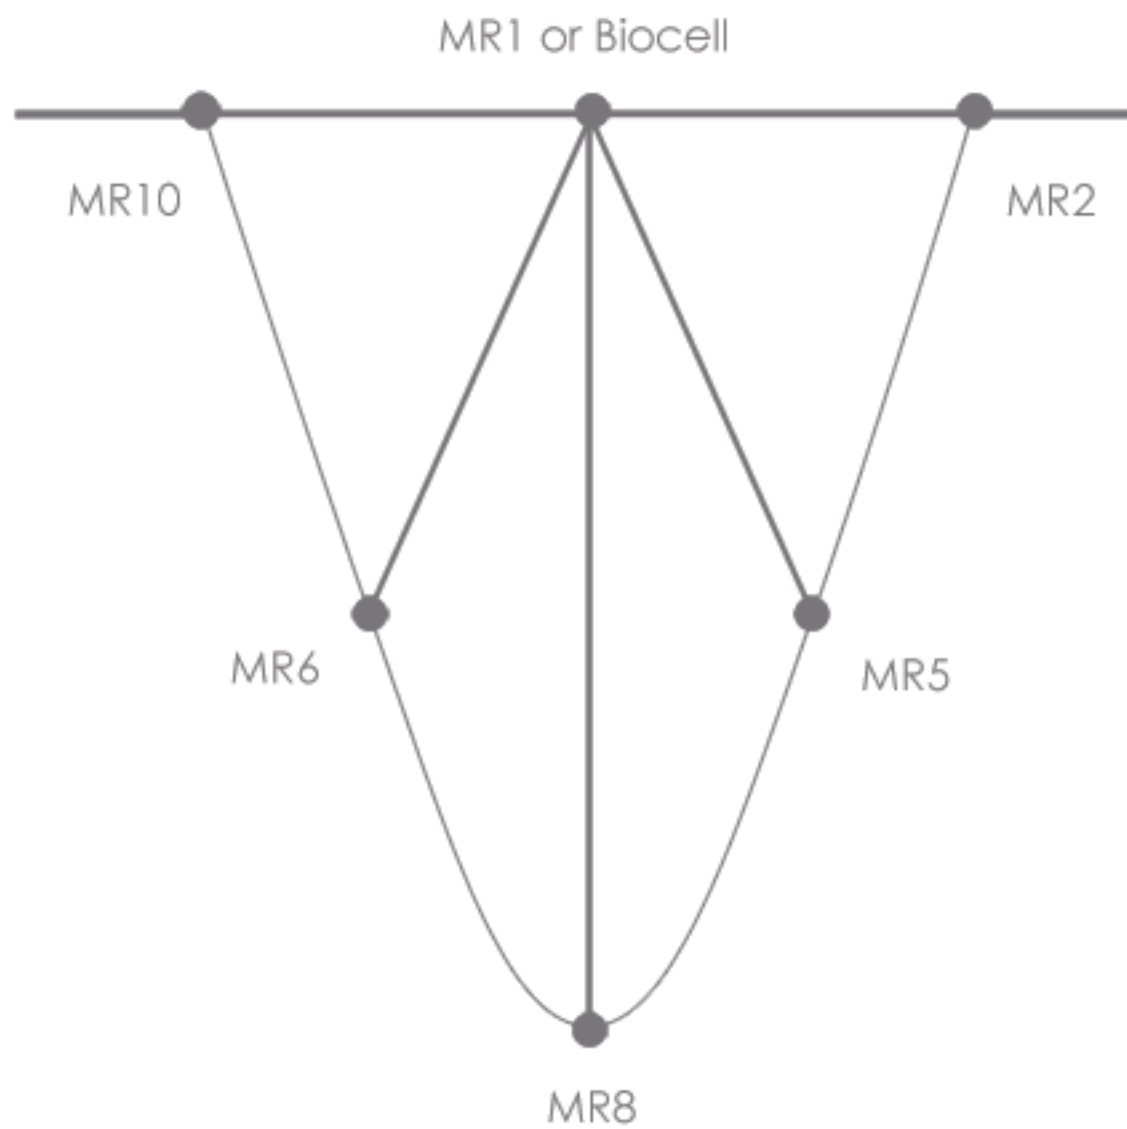

In this section we also have the infections in the sinuses that no one can heal. This is a healing phase coming from shock - heal the shock and you get better.

The third section sees emotions coming to the surface. If this becomes troublesome, take ES8 Chill.

And finally we get regeneration of tissue.

Infoceuticals can help regeneration, and there is also a full NES miHealth cycle which is for the correction of shock/stress. Cure this and we cure the disease. People with tissue plus and tissue minus diseases often find they have abscesses. In this case, use Biocell on miHealth directly over the abscess.

For Regeneration Phase Correction

Order	Number	MR Name	New Comment
1	MR2	Calm Mind	Use with EI 7
2	MR8	Nerve Cell Cone Regeneration	Use with MR2 for amino acid correction
3	MR9	Liberation	Use with Chakra 7, Love
4	MR4	Microtubule Functions	Use with Chakra 7, Love
5	MR7 or General Rejuv	Calcium and Terrains	Use for long periods
6	MR1 or Biocell	Super Cell Driver	Use for abscesses

Figure 20: MRs of NES provision for regeneration phase

For further correction use:

ESR, CHONG MAI (EI 12 + EI 10), Biocell or MR1

Full Matrix Regulation Cycle

Order	MR	Time for 30x used in MR Cycle
1	Matrix Carrier	2 minutes
2	MR10	4 minutes
3	MR6	3 minutes
4	MR8	2.5 minutes
5	MR5	1 minutes
6	MR2	2 minutes
7	MR3	2.5 minutes
8	Combo of 1-6	3 minutes
9	MR2	2 minutes
10	MR8	2 minutes
11	MR9	2.5 minutes
12	MR4	3 minutes
13	MR7	3 minutes
14	MR1	2 minutes
15	Combo of 1-6	3.5 minutes
	TOTAL	38 minutes

There is a case for the cycle on the NES miHealth, since experiments have shown that the full cycle is the only treatment that has an effect on tissue plus and tissue minus diseases. We found too that the MRs needed to be much stronger, so that shorter times of broadcast by the NES miHealth would still be effective. The broadcast mode for longer periods is by far the gentlest, and is also cost-effective for practitioners. The full cycles for active phase and regeneration phase must be done at the same time; on the same day or even straight away, a second treatment is preferred. There is a good scientific reason for this: the human body-field wave is a double wave, with four peaks in total. So a double treatment in one day is always more effective.

This covers a dozen diseases which cause severe pain and for which there is no effective treatment. This Matrix Regulator cycle is planned for future versions of the miHealth, although there is already an MR screen. If you use this - and you will need to for a time - you will have to use the electro-stimulation method, not the broadcast method on its own. You can use the times shown on the chart, but this will mean active stroking on the affected areas.

There are things that stop the MR cycles in their tracks, so of course you need to know what these are so as to avoid them. Detox really upsets the waveform. Toxins cause informational blockages. So we slowly detoxify using the NES miHealth Environmental screen. I stress, only detox if the client feels well. If the client is very weak, do not detox. Detox is only for stronger people.

The Environmental Megatoxins

COLON :

- Allethrin
- Tin
- Dichlorvos
- Chlorpyrifos

BREAST :

- N-heptane
- General fungicides
- Dichlorvos
- Hydroxy-toluene

PROSTATE :

- Tin
- Cadmium

LUNGS :

- Tobacco smoke
- Dioxane
- N-heptane
- Nickel
- Chromium
- Beryllium

These megatoxin groups can slowly destroy the function of the cellular matrix and its links to the connective tissue that appears to act like a second nervous system in the body. To find out more about this, look at the records of the Copenhagen Conference in 2008. There are talks by Dr James Oschman and Dr Mae-Wan Ho.

This antagonism caused by toxins means that if you have a tissue plus or a tissue minus disease, the detox programmes using NES miHealth cycles have to be slow and gentle with a great deal of treatment using the Matrix Regulator cycles. The entire point is to remember what you are trying to achieve. In healing - and this is especially important - we are trying to restore the wave function. Doing too much detox or too many heart treatments or emotional treatments can really interfere with this basic objective. We are trying to get the waveform to communicate without error. This is the reason why we arrange the cycle in a very specific order of treatment. The Matrix Calming Cycle has been developed to calm the matrix after attempts have been made to get rid of toxins from the environment.

The Idea of Coherence Again

We have spent our time together talking about how coherence can be a measure of value of data in the world of science. So now it's time to look at the framework of tissue plus and tissue minus diseases to check for any coherence with the many other workers who have theories and therapies and insights into this strange chronic disease pattern. First of all we draw the waveform, with its various sections or stages or phase relationships, then we add to it, in the correct location, the various theories:

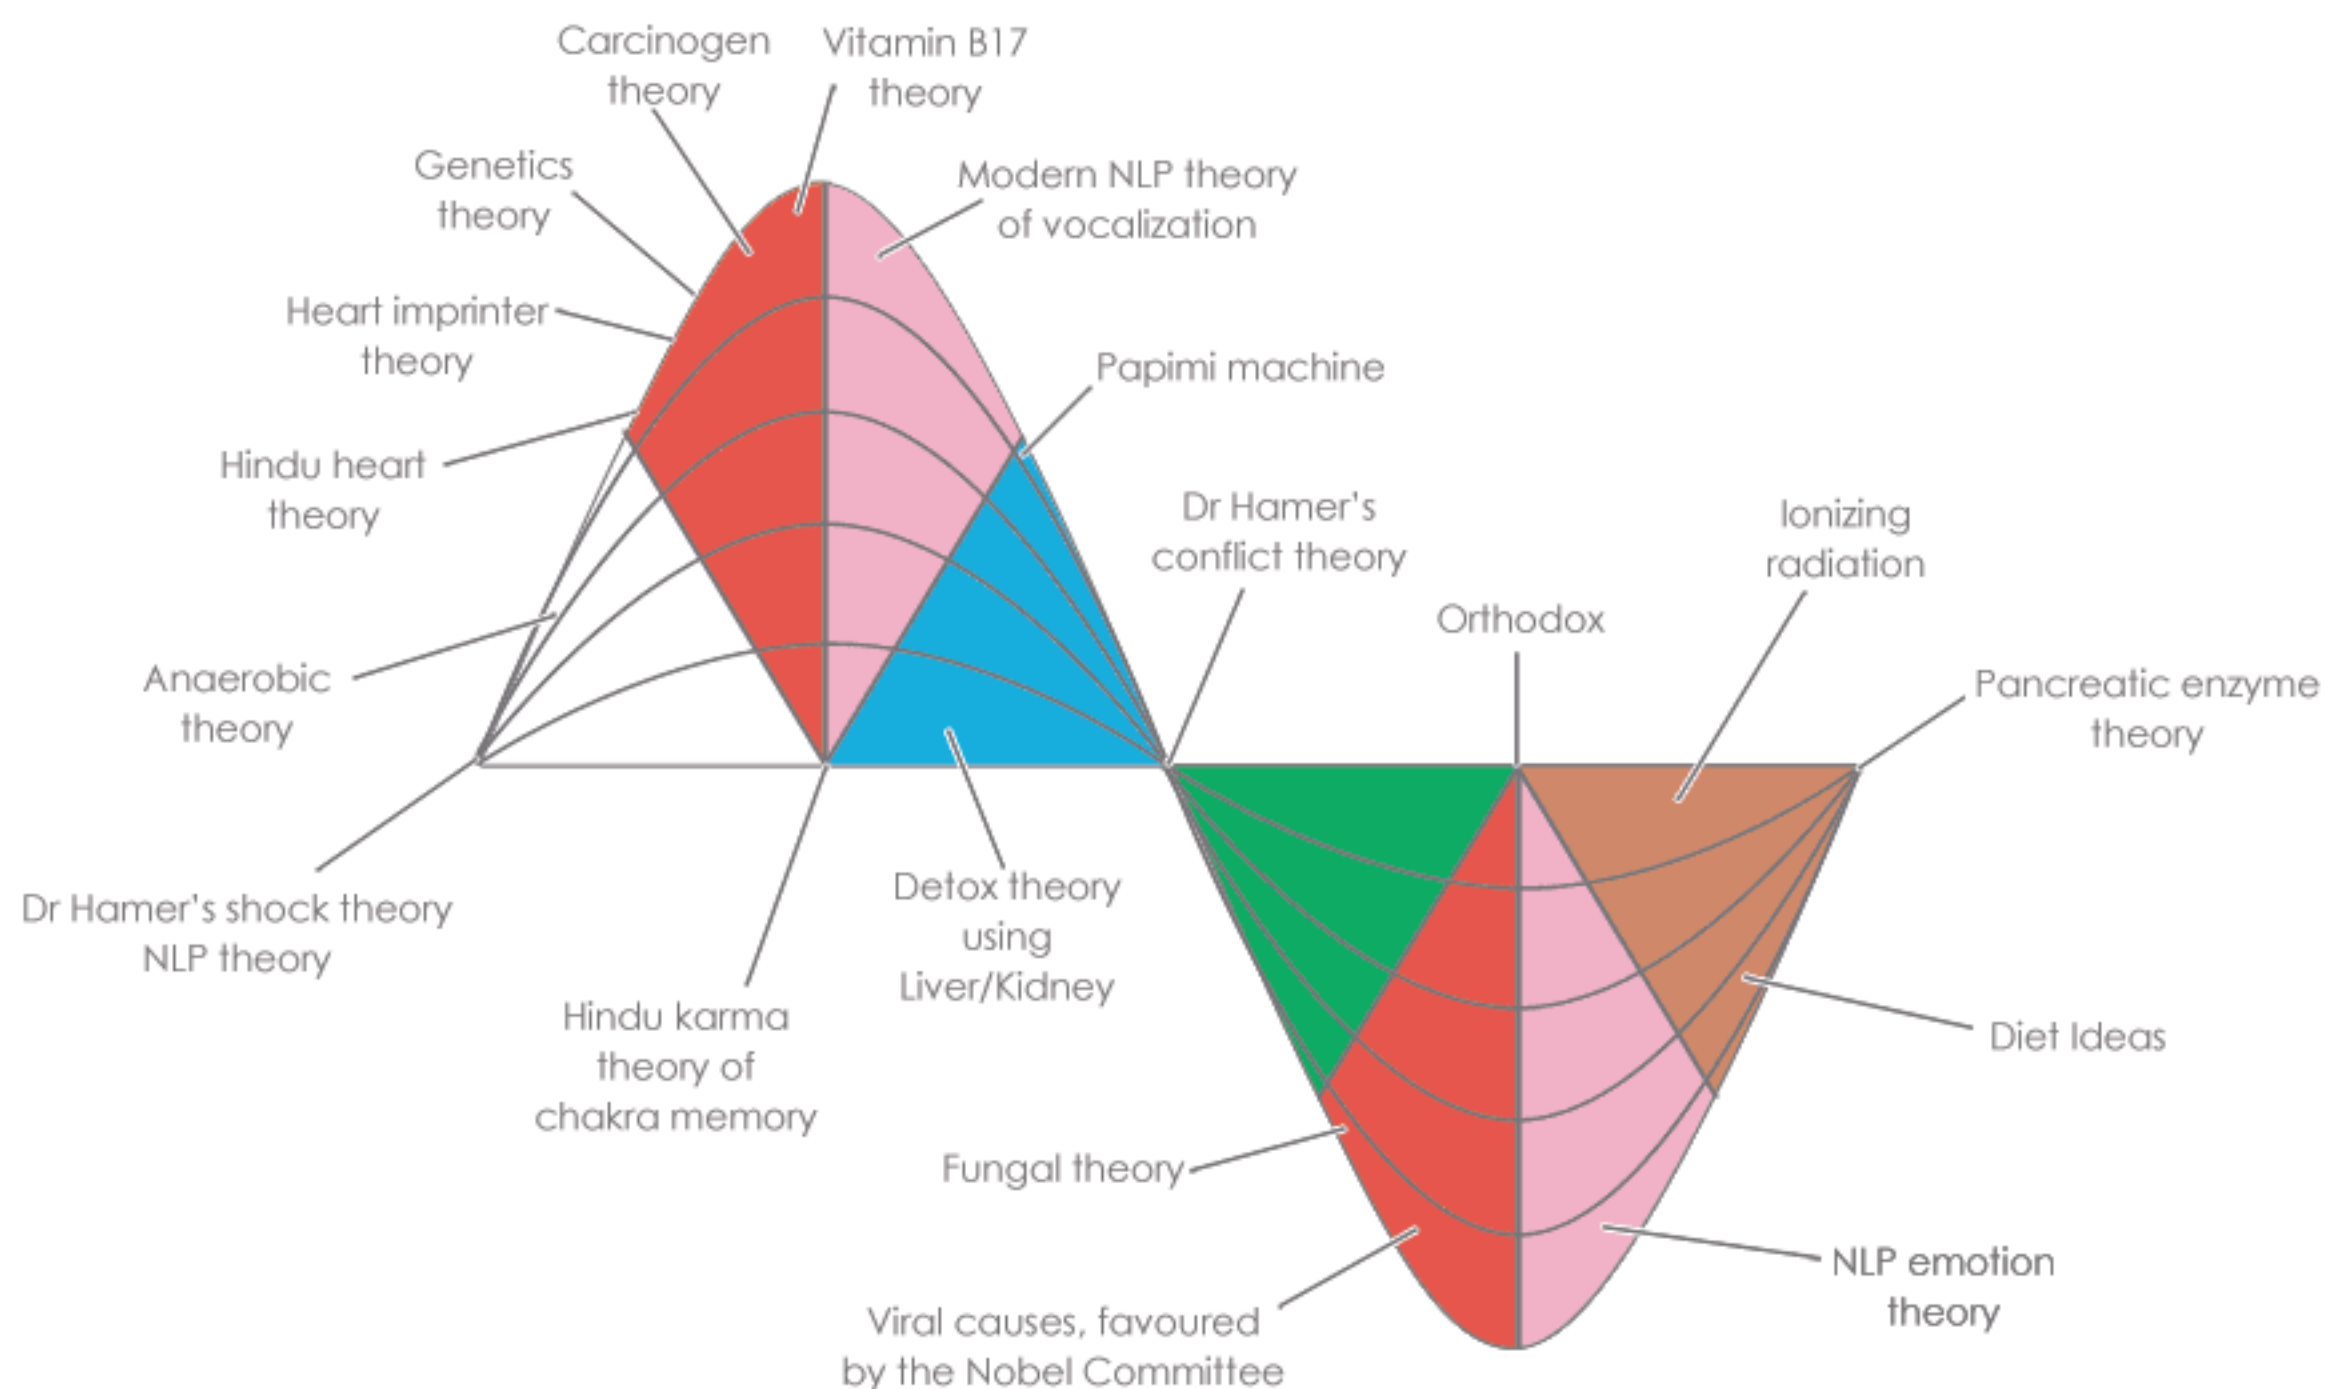

Figure 15: New idea of coherence

Everybody is a little bit right! So could the orchestra play a bit better together? Dr Hamer's idea is at the start of the system. So can we start there?

The MR cycle and Reconnection cycle will form an SRM with all the amino acids found in foods. Foods that upset the human matrix may be those with genetically damaged amino acids.³

To protect your own matrix from genetically damaged food, avoid these suspect foods, unless organically certified:

- cane sugar
- carrots
- chicken
- citrus juices
- cow's milk and products eggs
- honey
- olive oils
- potatoes
- tomatoes, raw and processed

Not all! Only some examples are suspect. The point is, the same foods keep on showing up in tests over many months. Genetic change is suspected.
