

93 % EFFECTIVENESS

IN OUTCOME STUDY

NES Health conducted a large outcome study involving 251 participants that collected data from across 367 data points.

In just one session, 88% of participants noticed benefits. After a second session, 93% felt their treatment was successful — when other modalities used previously hadn't worked.

Since Peter Fraser's revolutionary discovery and mapping of the Human Body-Field, NES Health has led the field of bioenergetics, supporting individuals worldwide by addressing issues relating to their health and wellbeing.

The Body-Field represents the general state of your overall physical and emotional condition. Distortions in this field can cause disharmony in your life. Corrections of these distortions support and encourage a more balanced, enjoyable, and rich life experience.

NES miHealth®

INTRODUCING MIHEALTH

Powerful, Compact & Multifaceted Tool to Promote Energy Flow and Wellbeing

WHAT IS MIHEALTH?

miHealth is a powerful hand-held, non-invasive, biofeedback device. It is effective for reducing stress, releasing and re-educating energy flow, muscles, nerves, organs and other areas of the body. As stress is released, energy can flow properly and support the body's optimal health.

21ST CENTURY SOLUTION TO OPTIMAL WELLNESS

Superseding other biofeedback devices, miHealth combines our one-of-a-kind information-based technology with a number of established technologies, including:

- 1 TENS (Transcutaneous Electrical Nerve Stimulation)
- 2 PEMF (Pulsed Electromagnetic Frequencies)
- 3 SCENAR (Self-Controlled Energy Adaptive Regulation)

MIHEALTH BENEFITS

These combined, superior technologies create one powerful, multifaceted device, with benefits including:

- Quick recovery following sporting activity
- Help with joint mobility
- Sleep pattern support
- Mental and emotional wellbeing
- Increased energy levels
- Feelings of relaxation

WHAT TO EXPECT FROM A MIHEALTH SESSION

Length:

Each session generally lasts between 2-3 minutes.

During a Session:

The non-invasive NES miHealth is either gently stroked over the body or used off body in "broadcast" mode. You may experience nothing more than mild tingling even though the miHealth is actively working.

Post Session:

You can expect to finish a miHealth session in a state of relaxation.
